Customizing Affiliate Link Destinations

When a visitor clicks on an affiliate's link, the system redirect them to the URL that you specified for **Domain** in the **General** tab at **Configuration > System Settings > General Settings**.
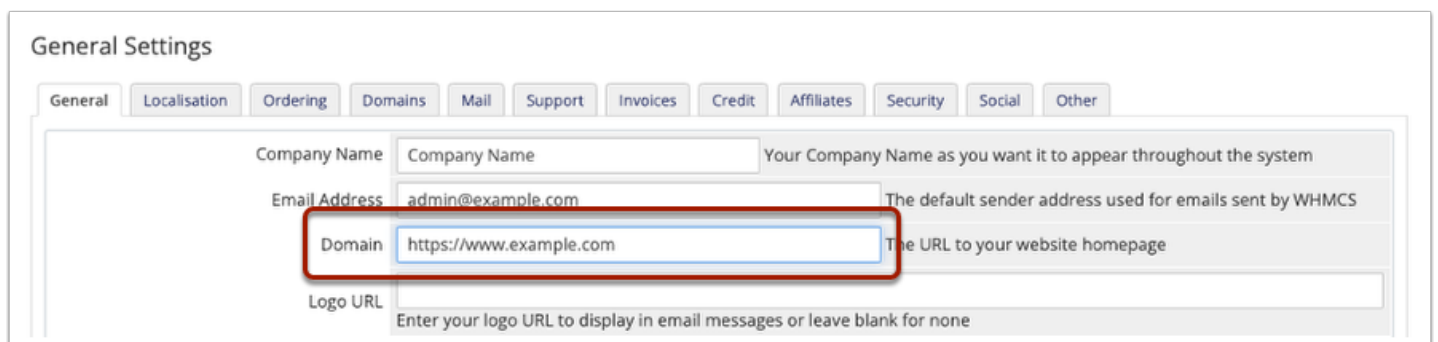

You can customize this destination with your desired location.

> 💡 Affiliate links can also link to specific products, the shopping cart, or the registration form. For more information, see [Affiliate Codes and Links](#).

Customize the Affiliate Link Destination

To do this:

1. Go to **Configuration > System Settings > General Settings** and select the **General** tab.
2. Enter the desired destination URL for **Domain**.
3. Click **Save Changes**.

Modifying the aff.php File

If you are familiar with writing PHP code, you can also customize affiliate link destinations by modifying the `aff.php` file.

> ⚠️ The system overwrites customizations to the `aff.php` file during updates.
