Setting Up Your Domain Registrar

To sell domains with WHMCS, you will need to set up at a domain registrar. WHMCS supports many popular domain registrars.

> ℹ️ For specific instructions for our most popular registrars, see Configure the Enom Registrar and Configure the ResellerClub Registrar.

Set Up a Domain Registrar

> ℹ️ Some registrars require you to perform additional steps external to WHMCS. For more information, see the documentation for your desired registrar.

To set up a domain registrar in WHMCS:

1. Go to **Configuration > System Settings > Domain Registrars**.
2. Find the desired registrar in the list.
3. Click **Activate** for that registrar. The page will reload with additional configuration options for the registrar.
4. Configure the desired settings.
5. Click **Save Changes**.

> 💡 After you do this, we recommend configuring pricing at **Configuration > System Settings > Domain Pricing**.
>
> For more information about configuring domains in WHMCS, see Domains Configuration.
