

Installing WHMCS via cPanel Site Software

⚠ cPanel, L.L.C. deprecated the **Site Software** feature in cPanel & WHM version 104. We recommend [performing a manual installation](#) instead.

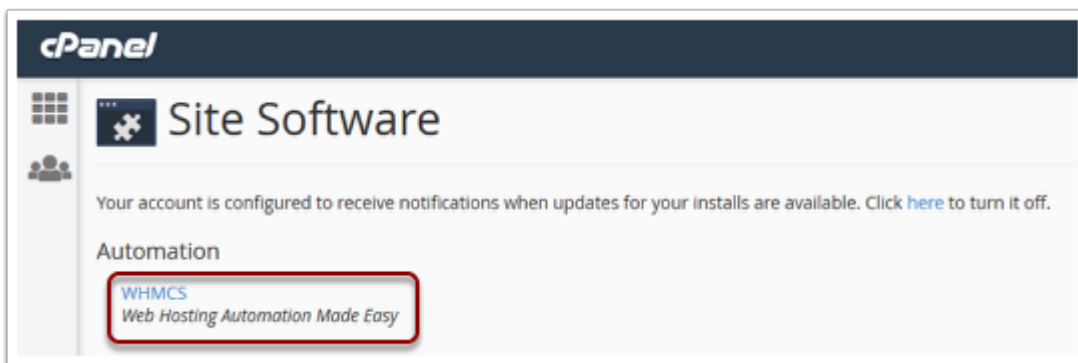

You can install WHMCS easily using cPanel's [Site Software](#) feature.

To do this:

1. If you have not already done so, [configure cPanel Site Software to offer WHMCS](#).
2. Log in to cPanel and go to **Software >> Site Software**.

3. Click **WHMCS**.

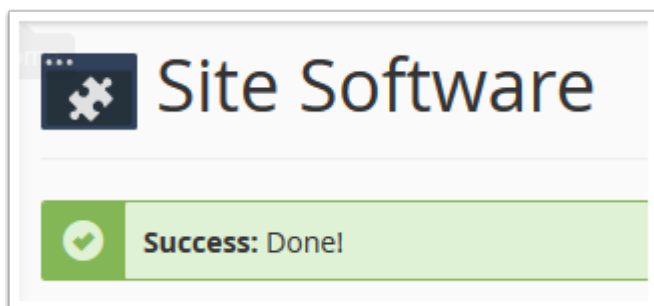

4. Enter the domain on which you want to install WHMCS.

The screenshot shows the cPanel Site Software installation interface. At the top, there are tabs for 'Install', 'Manage', 'Uninstall', and 'More'. Below the tabs, there is a link for 'Show Advanced Configuration'. Under this link, there is a section for 'Installation Domain:' with a text input field and a dropdown arrow. To the right of the input field is a link 'Add a subdomain'. Below the input field, there is a blue information box with a white 'i' icon. The text inside the box reads: 'Important: The one-click installer will write files in to the selected domain's document root. The installer will overwrite any files that exist whose names match a file name that is part of the cPAddon installation.' At the bottom left of the interface is a blue 'Install' button.

5. Optionally, click **Show Advanced Configuration** to choose specific configuration options, like a specific installation directory and admin account details.

6. Click **Install**. The installation may take up to 30 seconds.

7. Visit the displayed URL and log in to WHMCS using your admin account's credentials.

8. Review and agree to the End User License Agreement.
