

Changing the Default Currency

WHMCS's multi-currency system lets clients choose from one or more currencies. On a new WHMCS installation, the system default currency is USD. If you have not generated any invoice or transaction data yet, you can change this.

 For more information, see [Selling in Multiple Currencies](#) and [Currencies](#).

Change the default currency

 **Do not** attempt to change the default currency if you already have invoice or transaction data in WHMCS.

To change the default currency:

1. Go to **Configuration > Setup Wizard (Help > Setup Wizard** prior to WHMCS 8.0).
2. Click **Next** to proceed to the step 1 of the wizard.
3. Select the desired country. WHMCS will attempt to assign the currency of this country.

4. Click **Next**.
 - If you haven't already used it, we recommend using [the Getting Started Wizard](#) to complete initial configuration.

- If you have previously finished your initial configuration, click **Skip Step** to proceed through the steps.

5. Click **Finish**.
