

Configuring the Update Channel

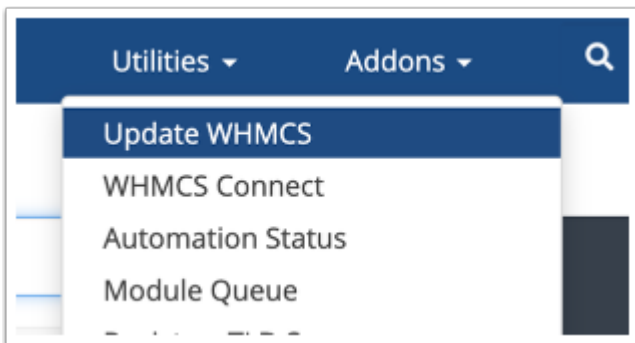

The **Update Channel** that you select provides control over which update notifications you receive and which version you can install using the [Automatic Updater](#) utility.

i You may need to check this configuration when you are manually [checking for updates](#). For more information, see [Update with the Automatic Updater](#).

Set your Update Channel

To change the release types that the Automatic Update utility checks for:

1. In the Admin Area, go to **Utilities > Update WHMCS**.

2. Click **Configure Update Settings** in the top-right corner.

3. Select the desired **Update Channel**.

- For most users, we recommend choosing the *Stable* channel. This only applies stable updates to your installation.
- For descriptions of each update channel, see [Automatic Updater](#).

Update Channel

This setting allows you to choose the updates you receive.

- ☒ **Stable** - Recommended for Production Use
- ☐ **Release Candidate** -
- ☐ **Beta** - Use for testing and development only
- ☐ **Current Version** - Restricts to maintenance updates for the currently installed version ()

4. Click **Save Changes** to complete the process.
