

Creating Your First WP Squared Server

Before you can sell and provision hosting accounts, you must add at least one server to your WHMCS installation.

The steps below create a WP Squared server in WHMCS. In WHMCS 8.8 and later, you can easily offer WordPress hosting to your customers on a [WP Squared](#) server. WP Squared, a WebPros product, hosts and manages WordPress-specific accounts while offering a specially-tailored version of WHM that meets all of the needs of WordPress hosts. For more information, see [WP Squared Account Provisioning](#).

WHMCS offers several different ways to incorporate WordPress into your hosting product offerings. For more information, see [WP Toolkit](#) and [WordPress Hosting](#).

Creating a WP Squared Server

To add your server to WHMCS:

1. Create an API token in WHM. For more information, see [Manage API Tokens in WHM](#).

Make sure to note the API token. You will need this in subsequent steps and cannot retrieve the token again later.

2. Log in to the WHMCS Admin Area.
3. Go to **Configuration > System Settings > Servers**.
4. Click **Add New Server**.
5. Select *WP Squared* for **Module**.
6. Enter the server hostname or IP address, your WHM username, and the API token that you created.

Module WP Squared ▾
Choose the control panel the server uses

Hostname or IP Address
Used to connect to your servers API

Username

Password

API Token

Test Connection » Continue Anyway

For help with these details, contact your hosting provider or system administrator.

7. Click **Test Connection** to ensure that WHMCS is able to communicate with the server. A success message will appear.

8. Click **Save Changes**. The **Servers** interface will appear, displaying the newly-added server in the list.

 **Server Added Successfully!**
The new server has been added and is now ready for use.

 After you add a WP Squared server, you will need to create at least one WP Squared product. For steps to create your first WP Squared product, see [Creating Your First WP Squared Product](#).
