

Configuring cPanel Site Software to Offer WHMCS

 cPanel, L.L.C. deprecated the **Site Software** feature in cPanel & WHM version 104. We recommend performing [a manual installation](#) instead.

You can install WHMCS using cPanel's [Site Software](#) feature. Before you can perform the installation, a WHM user must enable WHMCS for installation.

 The steps below require a server that runs cPanel & WHM 76 or higher.

Enable WHMCS in Site Software

To enable this:

1. Log in to WHM.
2. Go to **cPanel >> Install cPAddons Site Software**.
3. Check **WHMCS** under **Installed**.
4. Click **Update cPAddon Config**.

Installed	Vendor	Category	Name
<input type="checkbox"/>	cPanel, Inc.	Automation	WHMCS
<input checked="" type="checkbox"/>	cPanel, Inc.	Blogs	WordPress

☐ Force Refresh of All cPAddons Site Software Sources

[Update cPAddon Config](#)

Once the process finishes successfully, WHMCS will be available for installation via cPanel.

Completed

Success: The RPM installed.
