

# Troubleshooting Cron Job Not Completed Warning or Segfault

## Symptom

After applying the 7.9.0 update, the daily automation tasks may not complete fully, stopping at the *AutoTerminations* or *CancellationRequests* tasks.

This may manifest itself as a warning on the **Automation Overview** widget or to **Help > System Health Status**.

You may observe a Segmentation Fault in your server logs.

## Solution

Apply the 7.9.1 Maintenance Release via **Utilities > Update WHMCS**.

## Hotfix

A hotfix has been created for 7.9.0 only which will resolve the cause of this error in the new usage billing routines:
