

Troubleshooting CURL Error: 56 - OpenSSL SSL_read unexpected eof while reading

Symptom

You may see the following error when attempting to perform actions on remote systems, like managing domains via eNom or hosting accounts on servers:

```
CURL Error: 56 - OpenSSL SSL_read: error:14095126:SSL routines:ssl3_read_n:unexpected eof while reading, errno 0
```

 Click to copy

Cause

A system update to OpenSSL version 1.1.1e in EasyApache 4 version **2020-4-1** contains changes that cause this error. OpenSSL developers detected the issue and [fixed it in July 2022](#).

Solution

Updating to OpenSSL version **1.1.1f** will resolve this error. For more information, see [cPanel Support's article on the issue](#).

WHMCS technical support cannot assist in resolving this error.
