

# Setting the Default Country and Language

You can configure a default country and language for your WHMCS installation.

## Set the Default Country and Language

To configure a default country and language:

1. Go to **Configuration > System Settings > General Settings** (**Setup > General Settings** in WHMCS 7.10 and earlier).
2. Select the **Localisation** tab.
3. For **Default Country**, choose the country that you want the system to select by default on your registration and checkout pages.
4. For **Default Language**, choose the language that you want visitors to see when they first visit your store or Client Area.
